

Express TE - Trace Elements

Liquid Trace Fertiliser for Broad Acre & Pasture

Trace Element deficiencies often go undiagnosed due to extreme paddock variation. Express TE is a simple solution to a costly problem.

Features:

- A flexible, broad spectrum Trace source for quality grain and pasture.
- Can be applied pre-seeding, at seeding and post-emergent through a range of application equipment
- Express TE contains Chelated Trace Elements in several forms for immediate and sustained uptake.
- Chelated nutrients are more effective for plant uptake than nutrient salts - less is more! This ensures the right amount is available when needed, and guards against accidental over-application.
- Enhances UAN uptake, fully tank compatible.
- Dark concentrated liquid that becomes clear turquoise colour when diluted. Available in 1000L IBCs, 200L drums or Bulk liquid stored in on-farm storage tanks.

BENEFITS INCLUDE:

- Improves your risk management strategies and in-season flexibility.
- Easy application.
- Boosts trace element utilisation in unfavourable seasonal conditions. This evens and lifts yields by resolving multiple trace deficiencies in varied paddock conditions.
- Improves returns on fertiliser inputs through accuracy of application and efficient uptake.
- Stabilised formula for effectiveness and longevity. Surplus product is completely effective for the following season.

Advantages

- Economical to store whether stacking IBC's or using Bulk Tanks and remains stable in storage from one year to the next.
- Allows you to “play the season” by matching Trace applications to yield potential and can be applied throughout the season to fit in with existing management practices.
- Express TE can be blended with Eco-Vital to further increase uptake for foliar or in furrow application.
- Applied through a boom sprayer which is considerably more accurate and time efficient compared with using spreading equipment.
- Avoids Trace incompatibilities and ensures fast uptake.
- Easy to mix and use compared with less soluble oxides and sulphates.
- Fast uptake for immediate correction of deficiencies.

Application

Crops:

Express TE is suitable for application through both boom sprayer and liquid seeder system. Express TE is very effective for foliar application due to its rapid absorption.

Designed for maximum compatibility, however jar test and spot spray to ensure.

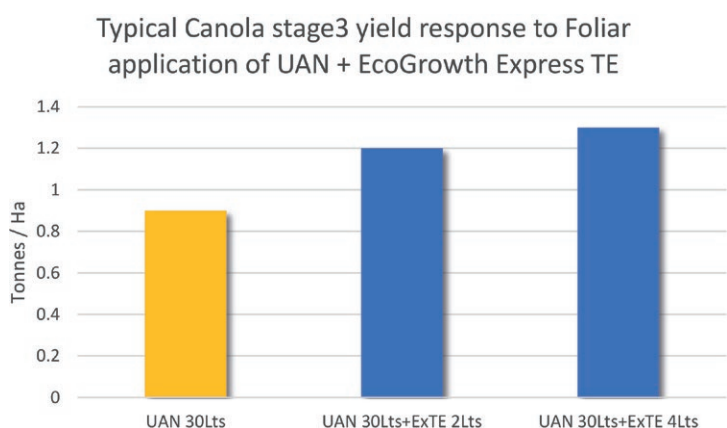

Foliar 1-5L/Ha: Typical application 2L/Ha in 50+L/Ha water.

Pastures:

Express TE can be applied with a boom sprayer during the season to boost pasture production. Express TE application is recommended after grazing to ensure full benefit to pasture.

As Express TE contains a balanced micronutrient analysis preferential grazing is likely and should be monitored if conducting strip treatments.

Foliar: Typical application 1-5L/Ha in 80+L/Ha water.

COMPATIBILITY:

- Fully Compatible with UAN, Eco-Fulvate and Eco-Vital.
- Recommend Eco-Vital is used with Express TE as a sticker spreader at 200ml – 2L/Ha
- Whilst buffered for maximum compatibility avoid mixing with fungicides and pesticides without first conducting a jar test and spray test to ensure no risk of phytotoxicity.

Typical Analysis

Nitrogen	N	3.3% W/V	
Sulphur	S	4.5% W/V	
Magnesium	Mg	15000 ppm	Chelate
Iron	Fe	20000 ppm	Chelate
Manganese	Mn	15000 ppm	Chelate
Copper	Cu	7000 ppm	Chelate
Zinc	Zn	12000 ppm	Chelate
Boron	B	6800 ppm	
Molybdenum	Mo	325 ppm	
Cobalt	Co	210 ppm	

Read Label or consult MSDS for full handling instructions and Safety information.

Note: Product may crystallise in extreme low temperature (below 2°C), however will re-solubilise when returned to normal conditions.
