

PASTURE FERTILISERS

Biologically activated Australian rock mineral fertilisers for pasture

BENEFITS INCLUDE:

- **Natural, volcanic and mineral-based inputs increase palatability and favours selective grazing compared with pasture grown using synthetic inputs alone.**
- **Good source of trace elements essential for animal health – including copper, selenium and cobalt.**
- **Suited to use in a range of soil conditions – including high and low pH soils and soils with sodium and aluminium constraints.**
- **Improved pasture density and reduced weed competition**
- **Low leaching and sustained release.**

Ecogrowth pasture fertilisers have been specifically formulated to deliver plant available, mineral-based nutrients naturally rich in trace elements.

The ecogrowth pasture fertiliser range is enhanced with the addition of EcoAdvance® Premium Biology. Our proprietary blend of beneficial biology has been developed over the last 25 years and drives the connection between fertiliser, soil and pasture in a powerful symbiotic relationship.

This creates nutrient dense pastures with high total dry matter, increased palatability and an increase in the overall health & contentment of livestock.

Eco-Pasture Autumn

Ecogrowth's Autumn pasture blend stimulates healthy new root development by combining colloidal Soft Rock Phosphate with our proprietary microbial inoculant – EcoAdvance®.

The synergistic combination of a highly bio-available source of phosphorus and beneficial microbes – including phosphorus solubilising fungi and bacteria - rapidly increases root biomass to provide a solid foundation for improving plant density, reducing opportunistic weed invasion, enhancing drought tolerance, and improving the overall resilience of pastures.

Being a colloidal clay, Soft Rock Phosphate remains plant-available even in phosphorus retentive (high PRI) soils, and provides sustained phosphorus availability under regular irrigation and/or heavy rainfall conditions.

Eco-Pasture Autumn also includes nitrogen to facilitate timely growth, whilst microbial N-cycling is maintained as a result of increased root development and carbohydrate production. Potassium along with natural, mineral-based elements - including calcium, silicon and trace elements promotes increased carbohydrate production and mineral availability, leading to greater pasture palatability and improved plant/animal health and nutrition.

Eco-Pasture Spring

Building on the foundations of our Autumn pasture blend where the emphasis is on strong root development and balanced nutrition, our Spring pasture blend focusses on nitrogen, potassium, sulphur and carbon to stimulate rapid vegetative growth for strong forage/pasture development and hay production.

Volcanic minerals form the foundational building blocks of soil, which combined with Eco Advance® microbial inoculation, add a further dimension of soil building and health.

The volcanic silicate minerals in Eco-Pasture Spring also provides key trace minerals essential for stock health and well-being and ensures good pasture palatability. The silicates also assist in building plant structural strength – improving the robustness of the new spring growth and reducing plant susceptibility to damage from animal traffic, pathogens and insect attack.

Application rate

Pasture (Non-Irrigated)	75-150kg/ha
Pasture (Irrigated)	150-250kg/ha

fertiliser for life

AVAILABLE IN 20KG, 500KG/1 TONNE BULKA BAGS

For alternative uses or applications please contact your Ecogrowth® Nutritional Expert.

Ecogrowth custom blends specific for your soil

Ecogrowth have the unique ability to produce custom blends of biologically activated granular fertilisers suited to your specific soil conditions and crop requirements.

By conducting paddock-specific soil tests and providing current agronomic advice, a single custom blend can meet most nutrient requirements while saving you time and money.

Ordering your custom blend is as easy as 1, 2, 3

1

Our trained nutritional specialists discuss your needs & analyse your soil/leaf test results

2

Our specialists design and price your custom blend

3

We manufacture and dispatch your custom blend fertiliser

Get agro

We're pioneers in biologically activated natural fertiliser.

Utilising detailed analysis and staying at the forefront of agronomic research means we can tailor solutions specific to any soil type and growing conditions.

Biologically activated Australian rock mineral fertilisers for pasture

Available in 20kg, 500kg/1 tonne bulka bags
