Typical uses and benefits include:

- Low leaching and sustained release
- Improves surface condition
- Increased quality and colour

Ecogrowth Emerald® is designed to enhance lawn surfaces by providing balanced nutrition and strong root growth. Colour is enriched in the leaf surface by increasing photosynthesis through trace balance and controlled macro release.

Root stimulation is achieved through a combination of natural ingredients such as mineral-based NPK, Humates and EcoAdvance® premium biology including Mycorrhizal fungi.

Ecogrowth Emerald® lawns are thicker and harder to wear due to enhanced tissue strength and stronger roots, resulting in a tighter knitted lawn and consistent surface in a wide range of conditions.

For best results, use in conjunction with Ecogrowth's Eco-Wet® soil wetter.

fertiliser for life

AVAILABLE IN 10KG, 20KG, 500KG/1 TONNE BULK BAGS
For alternative applications or to arrange a soil/plant test
