

BROADACRE FERTILISERS

Feed the soil to feed the plant

BENEFITS INCLUDE:

- **Fast acting for quick plant uptake.**
- **Long lasting without leaching.**
- **Compatible with a wide range of soil and environmental conditions.**

We work with growers throughout the life of the crop to provide exactly what the crop requires in each varying season while maximising the soil - plant - microbe symbiotic interaction to bring your broadacre production systems to life.

Our strategy is to provide base nutrition for strong crop establishment including a nutrient backbone to provide for the entire season. This base is complimented with balanced inputs, tailored to meet the prevailing seasonal conditions and crop yield potential.

Ecogrowth cropping fertilisers contain combinations of NPK, Silicate Minerals, Trace Elements, Humates, Fish and Kelp, Chelates and Biology and are:

- Durable under extreme conditions.
- Suitable for all soils.
- Ideal for wide range of pH's, including High Aluminium conditions.
- Granulated Rock Silicate Mineral base - High NPK.
- Fast releasing - slow leaching. Long lasting delivery.
- Australian made for Australian conditions including Sodic environments.

ECO-CROP NP

Designed for enhanced phosphorus availability in harsh conditions.

Eco-Crop NP delivers uniform crop development and exceptional longevity through the cropping season. Ideal for use in both light and heavy soils, including high PBI and aluminium rich soils.

ECO-CROP NPK

Ideal for light to heavy soils, including sodic environments. Eco-Crop NPK suits harsh conditions and reduces the impact of sodicity on crop performance.

Containing sulphate of potash in conjunction with a citrate-soluble microbially enhanced rock mineral base, Eco-Crop NPK encourages increased tillering and fattening of grain.

ECO-CROP PK

Suited for crops requiring high phosphorus for strong germination.

Eco-Crop PK promotes rapid establishment by facilitating the early root development required in legumes and annual/perennial crops via a combination of phosphorus sources including microbially enhanced soft rock (colloidal) phosphate. Ideal for mixed soil types including low pH / high aluminium soils.

ECO-CROP REGENERATE

Develop to assist in the transition from conventional cropping to regenerative farming systems. A carefully balanced mixture of natural sulphates, rock minerals and balanced microbial interactions deliver healthy, productive crops. Well suited for use in pasture-cropping systems and by growers undergoing conversion to organics.

Ecogrowth custom blends specific for your soil

Ecogrowth have the unique ability to produce custom blends of biologically activated granular fertilisers suited to your specific soil conditions and crop requirements.

By conducting paddock-specific soil tests and providing current agronomic advice, a single custom blend can meet most nutrient requirements while saving you time and money.

Ordering your custom blend is as easy as 1, 2, 3

1

Our trained nutritional specialists discuss your needs & analyse your soil/leaf test results

2

Our specialists design and price your custom blend

3

We manufacture and dispatch your custom blend fertiliser

fertiliser for life

Biologically activated Australian rock mineral fertilisers

Available in 20kg, 500kg/1 tonne bulk bags
