

Biology for life

EcoAdvance® premium biology brings soil to life with beneficial microbes that activate the rhizosphere surrounding plant roots.

Biologically active soil has better structure, moisture retention, enhanced nutrient cycling and improved mineral availability for quality, healthy plants.

Feed the soil to feed the plant

Good soil is a diverse and complex living ecosystem that provides balanced plant nutrition & resilience.

Ecogrowth works from below the ground up to rejuvenate and revitalise soil as nature intended, to create healthier crops. Because what goes into the plant, goes into the body.

A proven way to grow

Working with the natural biome has been proven to enhance plant and animal life.

Ecogrowth products and programs have consistently demonstrated that both yield increases and quality improvements are achievable for the long term.

fertiliser for life

Growing for the future means learning from the past.

Intensive farming practices can suppress our soil's ability to grow healthy crops.

Ecogrowth restores the natural balance and helps people grow their natural capital by connecting knowledge, product, soil & plant *for life*.

Aussie made

We're proudly Australian owned and operated with production facilities, laboratories and industry-experts all over Australia.

HOME GARDEN GUIDE

Work from below the ground up to rejuvenate and revitalise your garden

Benefits include:

- Encourage strong, healthy trees, plants & lawn
- Safe to apply during flowering and fruit set
- Builds soil biology & strengthens roots
- Suitable for use on most plants including natives

Ecogrowth home garden products provide natural, highly effective soil amendment and fertiliser solutions. Delivering a range of benefits for soil, plant, animal and human health, ecogrowth is the natural choice for complete garden nutrition.

Blue

Complete rock mineral-based fertiliser ideal for gardens, fruit & vegetables

Emerald

Balanced rock mineral fertiliser for thick, green turf.

1L TREATS OVER 300m²

Eco-wet®

Re-wets the soil instantly & holds water like a sponge.

Eco-humate

Improves fertiliser effectiveness and stimulates beneficial microbes.

Eco-vital®

A commercial strength liquid seaweed & fish fertiliser designed for a fast response.

Planting & maintaining home gardens

1. Incorporate quality soil conditioners into the top 150-250mm of the soil profile.
2. Apply **eco-wet®** with watering can or hose applicator 3-4 times per year
3. Apply 50-80g of **blue** per m² over newly planted areas
4. Water in and follow up fortnightly with **eco-vital®** applied through watering can, RTU or hose on applicator
5. Mulch new plantings with 75-100mm of coarse grade mulch
6. Reapply **blue®** every 6-8 weeks or as required

LAYING NEW LAWN

1. Prepare site and incorporate suitable amendments based on soil type
2. Apply quality lawn starter fertiliser such as **red®** or **blue®** as per recommendations from turf contractor
3. Before laying new turf, apply **eco-wet®** and water in well

MAINTAINING NEW LAWN

1. Apply **eco-vital®** at laying at 90ml/9L to reduce lawn stress and burning, and to encourage root growth
2. Apply 1/2 handful (approx. 25g) **emerald** 6-8 weeks after turf has been laid.

SEASONAL LAWN MAINTENANCE

The most important times to feed lawns are Spring and Autumn. Fertiliser applied in early spring will help with recovery after winter and resist summer weeds. Fertiliser applied in Autumn will maintain growth and colour well into Winter. Always apply when lawn is quite dry then water in immediately. Avoid fertilising on very hot days.

1. Apply **eco-wet®** seasonally or as required
2. Apply **emerald** at 1 handful (approx. 45-50g) / m² 3-4 times per year
3. Apply **eco-vital®** every 6-8 weeks throughout the active growing season
4. Apply **eco-humate** every 3 months (in conjunction with **emerald** applications)
